The Department of Materials Science & Engineering invites applicants for a
tenure-track faculty position beginning August 2019.

Particular areas of interest include design of metal alloys and related materials for
sustainability and service under extreme conditions, including ultrahigh temperatures and
aggressive environments. Research incorporating synthesis, characterization, and simulation is
of particular interest, as is research that complements existing efforts in high temperature
materials, nuclear materials, and advanced manufacturing across the College of Engineering.
Successful candidates will be teaching and developing undergraduate and graduate courses;
supervising graduate student research; developing and directing a strong, funded research
program; participating in departmental and university faculty governance; and contributing to
professional and public service.

Application deadline: December 14, 2018
